

10 km of optical cable

Overview

10 km (6 miles): Commonly used in urban networks with minimal loss. The maximum reach of a fiber optic cable is not a property of the cable alone — it is the result of a balance between the link attenuation and sensitivity of active equipment. A single OS2 cable can carry 1 Gbps over 100 km with suitable modules, or only 10 Gbps over 10 km with standard modules. Let's dive deeper together! What Factors affect the fiber optic cable distance?

Fiber optic cable transmission distance is determined by two primary physical factors that affect signal quality as light travels through the fiber medium. Single-mode fiber (SMF) supports distances up to 40-100+ kilometers for standard applications, while multimode fiber (MMF) is typically limited. Single-mode (OS2) Simplex Bare Fiber Optic Cable. 32808ft) LC-LC 9/125 () for 10G/100G fiber links This Genuine Corning® SMF-28e+ OS2 fiber provides superior bending performance, backward compatibility and ability to minimize signal loss which occurs in traditional. The SFP 10G LR (Small Form-factor Pluggable 10 Gigabit Long Range) optical transceiver is designed for long-range data transmission over single-mode fiber (SMF) optics.
