

# 10kV Substation Relay Protection Commissioning Scheme

## Overview

Complete relay commissioning checklist for substations, covering documentation review, injection testing, CT polarity checks, and trip verification. Westinghouse Electric Corporation prepared a System Requirements Specification for a “Substation Control and Protection System” for EPRI Research Project RP-1359-1 in April 1980 and developed the WESPAC system based on this specification in 1980s. Before a substation is energized, every protection relay must be. Recently completed testing & commissioning for a new substation involving the latest implementation of an advanced Circuit Breaker Failure Stage 2 scheme ∴ What makes this scheme interesting?

Instead of using conventional Busbar Protection force tripping, this implementation applies Buswire. This instruction manual comprises a complete description of the testing and commissioning of various electrical equipment installed in power substations. Each procedure includes the task, preconditions (work Status, needed documentation, involved personnel and measuring instrument used for.
