

# A 1000m fiber optic router can only run at 700m

## Overview

Fiber optic cable can be run anywhere from 300 meters up to 80 kilometers (roughly 50 miles) depending on the cable type, transceiver used, and network standard. For most enterprise or data center applications using multimode fiber, the practical limit sits between 300 m. This guide will break down the essentials, from selecting the right hardware to troubleshooting common issues that can arise in long-distance fiber runs. Setting up fiber optic connections involves several key hardware components. Single-mode. In this blog, I will discuss the fiber optic cable distance, the effect factors, how to choose the right fiber optic cables, and how to compare the transmission distances of single-mode and multimode fiber optic cables. Key. RG6 for Cable TV: A 1,000-foot RG6 cable works well for standard HD TV (500MHz), but at 1GHz (4K TV + internet), the maximum length drops to 700 feet.
