

AI-powered intelligent audio server

Overview

It brings AI-powered features like speech recognition, natural language processing, and intelligent call routing directly into traditional SIP-based systems, enabling advanced services such as interactive voice response (IVR), chatbots, and other conversational applications. GitHub - joelmale/audiobook-mcp-server: Advanced MCP server for intelligent audiobook library management with AI-powered pattern recognition, web lookup capabilities, and audio processing features. FlexAIServers can be used with traditional multichannel audio interfaces or with AoIP or standard Ethernet to process real-time. XiaoZhi AI Dev is an AI-powered ESP32 intelligent voice platform. We focus on sharing technical resources, integration tutorials, and AI feature introductions of XiaoZhi open source firmware, providing complete edge AI inference solutions with deep integration of large language models like. Amazon Nova Sonic addresses this need as a speech-to-speech generative AI model that delivers real-time voice conversations with low latency and natural turn-taking. This Audio MCP Server provides tools for managing audio devices, recording from microphones, playing back recordings.
