

Climbing Zigzag Bridge

Overview

The objective in employing such a bridge, constructed according to Zen philosophy and teachings, is to focus the walker's attention to the mindfulness of the current place and time moment - "being here, now".

Span range Short Material and Movable No Design effort Low Overview

A zig-zag bridge is a composed of short segments, each set at an angle relative to its neighbors and usually with an alternating right and left turn required when traveling across the bridge. It is used in a variety of settings. A zig-zag bridge is often seen in the mountains, and it may be made of stone slabs or planks as part of a pond design and is frequently seen in rustic settings. It is also used in urban environments. The post and plank version has an advantage when employed as a crossing of a muddy bottom or a stream. It is structurally stable, where a straight bridge might tend to tip due to the posts moving in the soft mud. Each segment is supported by a post.
