

# Configuration of the main switch in the home electrical distribution box

## Overview

The main switch provides a means of isolating the entire installation from the supply. Rating — typically 100A for a domestic installation with a standard. It houses the main switch, the protective devices (MCBs, RCBOs, or RCDs), and in modern installations, the surge protective device (SPD). It provides overcurrent protection for every circuit cable, earth. A distribution board or distribution box is where the main power supply is distributed to multiple loads. They ensure that electrical devices function properly while maintaining safety. Understanding the basics of switchboard wiring can help in troubleshooting minor issues. An Electrical Service Panel or a Circuit Breaker Panel is an important part of every residential electrical system. It takes in the AC Mains supply coming from your utility and distributes it to different circuits in your home through individual circuit breakers. Whether you are a seasoned DIY enthusiast or a beginner.
