

Corrugated cable tray joint

Overview

It joins two sections of cable tray together. Think of it as a bridge that creates a continuous pathway for cables. Bolts and nuts pass through these holes to secure the connection. We recognize the need for a complete cable tray reference source for electrical engineers and designers. Products of SFSP are manufactured from quality raw material according to the relevant international standards to meet all kinds of construction projects. Coating by means of a continuous dipping process. After the dipping process, the surplus zinc is blown off and one obtains an extra passivating coat (an ultra-thin protective). The English name of the cable tray is "Perforated Cable Tray" or "Cable Tray". What is cable tray?

The cable tray is designed in the. It is a structure consisting of two LONGITUDINAL SIDE MEMBERS connected by individual transverse members called Rung. As cable ladder and tray is non-conductive, there is no concern of transmitting. Fitting for the construction of T-joints or crossovers of Metatray® insulating trays for the conduction of electrical and telecommunication cables.
