

# Distribution box leakage moisture effect

## Overview

Waterproof distribution box moisture typically originates from condensation, gasket degradation, or cable entry leakage. Identifying. Conduits breathe, they draw in moisture laden air during the day and the moisture condenses when the temperature falls at night. The moisture may cause the deterioration or failure of electrical. Humidity and environmental factors: If the distribution box is in a humid or high-humidity environment for a long time, it may cause moisture absorption, aging or corrosion of the insulating material, which will affect the insulation performance of the shell and cause leakage problems. That's condensation—not just an annoying surprise, but a silent destroyer lurking in control cabinets worldwide. Whether it's an outdoor enclosure weathering. For global buyers sourcing electrical distribution boards (DBs) from ASEAN factories—whether in Vietnam, Indonesia, Thailand, Malaysia, or the Philippines—one of the most common field complaints during the monsoon season is unexpected tripping.
