## Overview

LC stands for Lucent Connector (also colloquially “Little Connector”). It was introduced by Lucent Technologies to deliver small form factor (SFF) optical connections that match the density of RJ-45 copper ports. It uses a retaining tab mechanism and the connector body. Fiber connector types LC, SC, FC, ST, MTP, and MPO are widely used in past and present. What are the differences between them?

Who is the most popular one?

Find the answer in the article. What is a Fiber Connector?

The optical fiber connector is a kind of detachable passive optical component used. FO media converters for Ethernet and fieldbus enable you to convert your copper interfaces to interference-free fiber optics without the need for complex surge protection, shielding, and equipotential bonding measures. Gigabit fiber optic converter with SFP port for 1000Base-T, DIN rail mountable.
