

# Gigabit Fiber Router Parameter Settings

## Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to update the firmware, configure Wi-Fi security, and customize your network. To set up your wireless network, begin by signing in to your GFiber account and navigating to your router's device configuration. With. This module provides basic configuration procedures for the Cisco 800M Series ISR and contains the following sections. Specifies the name for the router. Specifies. Internet connection type: Fiber (gigabit, half duplex) Download speed: 1000 mbit Upload speed: 500 mbit OpenWRT version: Newest snapshot (NOTE: I locally build the firmware image for the R9000, so tweaking the image and, if needed, compiling in support for some specific feature isnt a problem). This new higher speed requires a router with at least one 10 Gigabit Ethernet (GbE) connection as well as support for Wi-Fi 7, the newest generation of Wi-Fi, which provides the fastest Wi-Fi.
