

# How much does it cost to build a new fiber optic communication system

## Overview

Home and business fiber optics projects typically range from a few hundred to several thousand dollars, depending on run length, fiber type, and labor needs. The main cost drivers are materials, installation time, and environmental factors that affect trenching, conduit, and terminations. Total Project Costs: For commercial installations, expect costs ranging from \$5,000 to \$20,000 per mile for underground projects and from \$40,000 to \$60,000 per. This should be no surprise since previous studies by Corning and others have identified labor makes up the majority of costs in a fiber build. With labor's share of costs roughly twice that of materials, network builders are looking to find the most efficiencies there, with aerial enabling. These networks are constructed both underground and through aerial fiber, at an average cost of \$1,000 to \$1,250 per residential household passed or \$60,000 to \$80,000 per mile. Dgtl Infra provides an in-depth overview of fiber optic network construction, including its density, as measured by. Getting accurate cost estimates is crucial for winning fiber installation bids. This breakdown gives you real numbers to build better estimates. We'll show actual costs for. Studying the cost of fiber deployment over time is critical to our understanding of the value of our investments in broadband," said Deborah Kish, VP of research and workforce development for the Fiber Broadband Association.
