

# How to fit items into a distribution box

## Overview

Compute the best box for a quantity or how many items fit a box. Considers orientation and packing. Outer size is reduced by  $2 \times \text{thickness}$  on each dimension to compute inner usable space. Whether you're shipping products, loading a container, or packing for a move, our calculator uses a proven 3D packing algorithm to show you exactly how items fit — and how much. Learn how ShipperHQ's Best-Fit algorithm chooses the right boxes, improves dimensional weight accuracy, and helps you save on shipping. ShipperHQ's Best-Fit algorithm figures out how to pack your items into the right boxes to make sure. Getting storage right for distribution is all about striking a balance: enough stock in the right spots to hit service levels, but not so much that space and working capital get eaten alive. Think of your warehouse as a highway interchange. If the ramps, lanes, and signs are clear, trucks and cars. Efficient inventory management and logistics planning require precise calculations, especially when determining the number of parts per box.
