

Incorrect access switch information location

Overview

- Use the "show ip default-gateway" command to verify the current IP default-gateway. I've provisioned the C9800-WLC-1, created WLANs, profiles, managed AP locations, and assigned APs to such location Floor. and life is good; all works as expected. Now I've Provisioned C9800-WLC-2, configured WLANs, profiles, assigned WLC to a site (AP managed sites as well), and I want to move AP. PowerToys can get location of my PC however the sunrise and sunset time is wrong. Seems due to the location was not match for real location: As the screenshot, actual location should be 45°, -76°. Not sure what cause this issue. A network switch is a device that connects different devices within a local area network (LAN). The switch forwards data based on the destination device's MAC address, ensuring the information gets to the. Whether you're moving to a new office, reconfiguring your current space, or simply optimizing your network layout, relocating your Cisco access points and data switches requires careful planning and execution.
