

Lithium battery cabinet for wind power generation is resistant to high temperature

Overview

- High temperature resistant up to 2552 °F / 2552 °C
- Lightweight, highly advanced fire insulation materials incorporated in walls, bottom and lid
- Special fire resistant vents for controlled relieve of explosion pressure
- Filter system in lid to prevent release of toxic gasses

Lithium-ion batteries are the driving force behind today's portable power revolution—powering everything from electric vehicles to industrial equipment, tools, and communication systems. As their use expands across sectors, so do the risks associated with improper handling, charging, and storage. Lithium-ion batteries can heat up to more than 1000 °C in the event of a failure. Safe enclosure of the powerful batteries by our battery housing helps to keep the temperature under control and ensure safety for both people and machine. Thanks to our many years. The LithiumSafe™ Battery Box is designed for safely storing, charging and transporting lithium ion batteries. The most intensively tested battery fire containment solution on the market, engineered to fight all thermal runaway problems:

- High temperature resistant up to 2552 °F / 2552 °C
- High Voltage Battery Cabinets are critical components in modern energy storage systems, engineered to deliver reliable performance under high-voltage conditions. Dual-wing doors provide full-width access, making it easy to handle multiple or oversized battery units. Integrated butterfly valve vents automatically seal at 158°F during. This system adopts the outdoor container BESS system, which contains high...
