□ Cable reel order. A 4 Core Optical Cable is a fiber optic cable that contains four individual optical fibers within a single protective outer jacket. Each fiber is capable of independent data transmission. Since most network hardware uses a "Duplex" system (requiring two fibers: one to Transmit and one to Receive). OM4 multimode fiber optic cables have a core diameter of 50 microns, which allows them to transmit data over distances of up to 550 meters at a speed of 40 gigabits per second (Gbps), and up to 150 meters at 100 gigabits per second (Gbps). The OM4 designation refers to the cable's optical. Offered dry or gel-filled in plenum, riser with outside plant (OSP) and indoor/outdoor LSZH ratings – ideal for enterprise or industrial applications. It shall be suitable for indoor applications, complying with IEC standards for l w smoke / zero halogen and EuroClass Cca and B2ca for fire protection. Our 4 Core FTTH Single Mode Optical Fiber Cables are designed to meet the high demands of modern telecommunications networks. With an outer diameter (OD) of 5.
