

Power supply module for distribution network automation terminal

Overview

Designed to handle up to 250V AC/DC at 30A max, this versatile module features dual input terminals for connecting one or two power supplies, enabling redundancy when needed. It splits power into 12 circuits for + and - connections, making it ideal for 24V DC. The RTU500 series modules can be used with all product lines to provide additional and extended functionality. The modules provide special functions to complete a RTU for a specific application. The growing need for smarter, more compact control systems has created strong demand for customizable power solutions. DIN rail mount technology has become. The ZT-F30X Distribution Automation Feeder Terminal Unit is a remotely located terminal of the distribution automation system, independently developed against the backdrop of the construction and development of smart grids. This standard power distribution kit supports hot swapping illegal fallback.
