

Professional-grade AI server chassis

Overview

These chassis formats support high airflow, efficient cabling, and easy expansion as workloads grow. Ideal for sensitive workloads and low-latency applications. Artificial Intelligence (AI) server manufacturers have experienced surging demand as data center operators require significantly more computing power than before the advent of ChatGPT and other Generative Artificial Intelligence (Gen AI) tools. Enterprises are investing billions of dollars in cloud. The new Cisco UCS X580p GPU node with UCS X-Fabric delivers GPU-dense performance, scalable fabrics, unified management, and supports NVIDIA RTX Pro 4500 and 6000 Blackwell Server Editions GPUs. Cisco UCS X-Series redefines AI infrastructure flexibility. With a compact 480mm depth and massive GPU clearance, it bridges the gap between industrial durability and high-end computing power. As an NVIDIA partner, Chenbro is dedicated to promoting the adoption and expansion of the MGX architecture by offering versatile server chassis solutions. Chenbro collaborates with system. BIZON offers the most advanced NVIDIA GPU servers for AI/ML, training, inference, deep learning, data science. Pre-installed with AI/ML software stack (PyTorch, TensorFlow, CUDA). Powered by the latest NVIDIA Blackwell architecture, AMD. By leveraging modern rack-mount servers and the latest NVIDIA RTX PRO Blackwell GPUs, businesses can create a powerful, flexible, and scalable on-prem AI environment. With the right hardware foundation, your organisation can build and deploy AI systems confidently—while maintaining full ownership.
