

# QSFP optical module LC optical interface single fiber

## Overview

Single Mode QSFP: The SMF type typically features an LC connector and a WDM laser, suitable for 9/125 single-mode fiber cabling, offering a maximum link distance of 80 km at 40 Gbps. The QSFP-100G modules are our latest generation of 100G transceiver modules solution based on a QSFP form factor. These hot-pluggable transceivers provide high-density, high-performance connectivity. Single fiber QSFP28 modules (commonly called BiDi transceivers) enable full-duplex 100G communication over a single optical strand. They do this by using Wavelength Division Multiplexing (WDM) to carry upstream and downstream signals at different wavelengths on the same fiber. Tx wavelength — one. Designed for long-reach 100G links on 1310nm single-mode fiber (SMF), QSFP 100G LR4 has become a go-to choice for connecting switches, routers, and interconnect systems across buildings, campuses, and metro-edge facilities — while still keeping the deployment simple and standardized. What is QSFP. This guide aims to give you a complete idea of various types of Cisco QSFP modules and their characteristics and uses.
