

RCS relay protection device

Overview

RCS-931 series ultra-high voltage line complete set protection device is a digital ultra-high voltage line complete set fast protection device produced by NARI-RELAYS. It can be used as the main protection and backup protection for 220kV and above voltage level transmission lines. Numerical relays are based on the use of microprocessors. A big difference between conventional electromechanical and static relays is how the relays are wired. The selection and applications of. A residual-current device (RCD), residual-current circuit breaker (RCCB) or ground fault circuit interrupter (GFCI) is an electrical safety device, more specifically a form of Earth-leakage circuit breaker, that interrupts an electrical circuit when the current passing through line and neutral. The unique generator-transformer unit protection provides the complete main and backup protection of generator-transformer units which comprises generator, main transformer, auxiliary transformer and exciter or excitation transformer. Redundant controller and power supplies are. Page 2 AEG Power Solutions is a world specialist in AC and DC power conversion.
