

RRU optical module and RRU correspondence

Overview

The RRU remotely extends the reach of the RBS by up to 10 km. It is designed to be located near the antenna. The RRUs can be connected in a cascade configuration and a star. This document provides reference for planning and deploying a DC blade RRU5909, RRU5309, RRU5309w and RRU3959a (referred to as RRU in this document). 3 RRU Cables The RRU cables include the PGND cable, power cable, AISG multi-wire cable, AISG extension cable, CPRI optical cable, RF jumper, and alarm cable. It presents the exterior and describes the ports, functions, cable types, connector specifications, and cable connections of the RRU. Product Name RRU5909 RRU3959a Solution. The base station can be divided into two modules: the RRU for transmitting signals and the BBU for processing signals. It performs RF front-end functions that directly impact network performance. Remote Radio Unit (RRU) is often used as a generic expression for a remotely installed Radio Unit (RU).
