

# Service life of fiberglass cable trays in Indonesia

## Overview

Lifespan (15-20 years): The cable tray lifespan of fiberglass trays typically ranges from 15 to 20 years. They are highly resistant to corrosion, especially in environments like sewage treatment plants, chemical processing facilities, and offshore oil rigs. A fiberglass cable tray is a cable support system made from composite material based on glass fibers reinforced with specific resins. This combination produces a product that is lightweight yet strong, with excellent resistance to corrosion. Ideal for harsh industrial environments, outdoor installations, and areas exposed to chemicals or extreme weather, our FRP Cable Tray deliver. Our FRP Cable Tray & Cable Ladder system designed and developed to satisfy a need in the electrical and corrosion industries for an improvement over galvanized steel aluminium or thermoplastic/non-metallic cable tray system.
