

# Should the fiber optic light on the router be on

## Overview

Ensure your Fiber Jack is connected to the network and the LED lights are connected and working properly before moving on to troubleshoot your router. POWER Normal: Solid/stagnant light. If OFF: The router is not powered — check the socket, adapter, or power cable. PON (Passive Optical Network) Normal: Solid. The LEDs on your modem, optical network terminal (ONT), router, or modem/router combo (gateway) are most likely blinking because they're communicating what the device is doing, or there's an error. All networking devices, like modems and routers, provide a row of status lights that represent the. Router status lights, often referred to as LED indicators, are small lights on the front panel of your router. They're actually telling you a story about your internet connection. And knowing the Modem router lights meaning can save you hours of troubleshooting frustration and help you diagnose problems before they completely. The Optical Network Terminal (ONT) is a crucial device in modern telecommunications, serving as the interface between your home network and the fiber-optic internet connection provided by your Internet Service Provider (ISP). One of the key aspects of the ONT is the array of lights on its front.
