

Solution Active Optical Devices QSFP

Overview

This document provides comprehensive technical information about QSFP technology, covering specifications, applications, thermal management, and implementation considerations. The original QSFP+ module supports 4 lanes of 10 Gbps transmission for a total aggregate bandwidth. Our active optical cable assembly portfolio provides improved cable flexibility and longer reach as compared to both traditional passive copper and emerging active copper (ACC/AEC) solutions, supporting high performance computing, data center and networking interconnect applications. Originally designed for 40G Ethernet (QSFP+), they have evolved to support 100G, 200G, and 400G speeds with new standards like QSFP28 and QSFP-DD. Unlike a simple. Molex's quad small form-factor pluggable (QSFP+) solution is designed for high-density applications. A mating interface is where the two separable pieces of a connector system that come together to form an interconnect.
