

Telecom Chassis Expansion

Overview

The global telecom chassis market is expanding rapidly, driven by increasing demand for 5G infrastructure, edge computing deployments, and data center modernization. Current projections estimate the market to grow at a CAGR of 7.8% through 2028, fueled by investments in high-capacity networks. Can operators physically accommodate required hardware upgrades while maintaining urban aesthetics and energy efficiency?

The ComFlex NG Series Distributed Antenna System is the Next Generation of Comba Analog DAS. This is an RF over fiber to RF + Power over coaxial cable solution that enhances a wireless network's coverage by extending cellular services from existing cell sites to an indoor environment. Modular architecture supports scalability. As industries worldwide accelerate their digital transformation, mobile networks are facing unprecedented demands. From immersive applications to digital twins, autonomous operations and AI-powered decision-making, tomorrow's services will require connectivity that is faster, smarter and far more. The Advanced Telecom Computing Architecture (AdvancedTCA®) specifications, denoted PICMG 3.
