

Testing Fiber Optic Communication with a Light Pen

Overview

Detect faults and verify fiber optic connections with the Light Pen 10mW, a reliable Visual Fault Locator designed for effective troubleshooting. Its advanced rotary automatic lift laser head ensures smooth operation, while the integrated LED lighting improves visibility in low-light. A fiber visual fault locator pen VFL for fiber optic installation, fault finding, continuity checking, polarity checking, verifying a signal path, and identifying a fiber. For use on single mode, multimode and plastic fibers, this is a low price 1mW fiber laser light tester that complies with the. Fiber optic cable is a type of cabling that contains one or more optical fibers for transmitting data at high speeds and/or over long distances using light. These fibers are most commonly made of glass and are very thin, typically less than a tenth of the width of a human hair.
