

The Role of Industrial Fiber Optic Switches

Overview

Industrial fiber optic Ethernet switches are designed to deliver stable, long-distance, and interference-resistant network connectivity in harsh industrial environments where copper Ethernet is limited by distance or electromagnetic noise. Fiber-optic transmission is a process in which the transmission of fiber-optic signals or their pulses from the source to the destination is carried out using industrial fiber-optic switches. This activity takes place at Layer 2 or the data link layer of the network model. They are used for connecting multiple IP equipment such as CCTV cameras, wireless access points, IP phones, computers, access. Fiber-optic switches control light paths within fiber optics, ranging from simple on/off types to complex matrix configurations like 64×64. The simplest device is an on/off switch with one input and one output, which allows. Our range of fibre products include unmanaged and managed switches, switches with routing capability, device servers, media converters and fibre optic modems. For added flexibility, we offer a wide range fibre optic transceivers that are compatible with all Westermo products with SFP interface.
