

The construction site electrical distribution box needs to be inspected every few days

Overview

Construction sites: formal visual checks weekly; combined inspection and tests about every 3 months for 110V tools, leads and site transformers; RCD push-button checks monthly. This guidance is aimed at those responsible for planning and subsequent management, and those who control the installation and use of electrical systems and equipment on construction sites. Order this product from HSE Books It explains what to do to reduce the risk of accidents involving. Attach a monthly inspection tag on the DB panel, updated with the latest inspection date. Provide a protective canopy over the DB panel to prevent water ingress. The checklist should be used regularly, typically at the start of each new construction project, after major electrical installations, and as part of routine safety inspections throughout the project duration. This template provides a good starting point to customize your process. For accurately document site inspections, essential information are included. Authorized operator name contact no.
