

The distribution box has many protruding wires

Overview

The photograph on the left shows a dual panel configuration: a main panel on the right (with front cover in place) and a subpanel on the left (with cover removed). The subpanel is fed by two large hot wires and a neutral wire running through the angled conduit near the top of the panels.

Overview A distribution board (also known as panelboard, circuit breaker panel, breaker panel, electric panel, fuse box or DB box) is a component of an electrical system that divides an electrical power feed into subsidiary circuits. North American distribution boards are generally housed in enclosures, with the components positioned in two columns operable from the front. Some panelboards are provided with a door covering the front. This picture shows the interior of a typical distribution panel in the United Kingdom. The three incoming phase wires connect to the busbars via a main switch in the centre of the panel. On each side of the panel are two.
