

The function of the protective sleeve for the pigtail fiber optic cable

Overview

Fiber sleeves, also known as connector sleeves or ferrules, are protective enclosures designed to house and secure fiber optic connectors. Composed of durable materials such as ceramic or metal, these sleeves shield connectors from external factors that could compromise signal. The protection sleeve is meant to protect the splice joint and exposed fiber after the splice has been completed. This products is made up of cross linked polyolefin heat-shrinkable tubes, hote melt tubes and Stainless steel needle. Key. The FP-03 series is the industry standard for durable and lasting protection of single fiber splices in field installations, while the FP-04 (T)/05 provide these same performance levels for 8/12 fiber ribbon respectively. The connector end is polished and tested under factory conditions, ensuring low insertion loss and high return loss.
