

Unit s distribution box

Overview

A distribution box, or DB box, is a circuit breaker enclosure. It is a vital part and central hub of any electrical system. The hub distributes electrical power from a single input source to various circuits throughout a building. Manufacture custom made Local Control Stations & Distribution Boxes, local control panel boards and stations, explosion protected control units, distribution boxes, grounding control device, motor starters, motor switches, made stainless steel AISI 316L or AISI 304L. A distribution board (also known as panelboard, circuit breaker panel, breaker panel, circuit breaker, electric panel, fuse box or DB box) is a component of an electricity supply system that divides an electrical power feed into subsidiary circuits while providing a protective fuse or circuit. Our flexible distribution boxes enable reliable, decentralized signal transmission and power transmission up to protection class IP67 - wherever passive distribution boxes are required. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. The metal distribution box is designed for a wide range of low-voltage applications in residential buildings, commercial complexes, offices, and industrial facilities.
