

Viewing the configuration of Huawei core switches

Overview

To view port configurations, you can use the command display current-configuration interface. This command can show whether the port is in an Up/Down state. In order to ensure efficient operation and stability of the network, network administrators need to regularly monitor and manage the status and configuration of switches. With its excellent performance and rich functions, Huawei switches have become one of the preferred devices for many enterprise. The display command is the most fundamental and crucial information-viewing command for Huawei network devices (including switches, routers, etc. Set the log level and configure the log buffer size to ensure SNMP-related logs are captured. Issue 01 (2019-06-28) Copyright © Huawei Technologies Co. Run the display eth-trunk command to check the working mode of an. Without genuinely understanding how to wield these commands - configuring VLANs precisely, managing security boundaries effectively, optimizing traffic flows, troubleshooting those inevitable gremlins - your expensive infrastructure might as well be running on training wheels.
