

Waterproofing measures for the electrical distribution boxes inlet cable

Overview

9 Waterproofing and drainage measures should be taken for the cable mezzanines, cable trenches and cable rooms located below the outdoor floor of substations and power distribution stations ; waterproofing measures should also be taken for the cable inlets . 6. A robust waterproof distribution box shields sensitive components from moisture, dust, and mechanical impacts. (3). IP stands for Ingress Protection (also sometimes called Ingress Rating or Ingress Level), defined under the IEC 60529 standard. The “IP” is followed by two digits (sometimes extended with letters), denoting protection levels against solid ingress (dust, particulates) and liquid ingress (water. Learn what the NEC requires for electrical work in wet locations, from GFCI protection and burial depths to pool wiring and outdoor enclosure ratings. The National Electrical Code (NEC) requires every electrical component installed in a wet location to be specifically rated, listed, and installed. Depending on their design and intended application, cables are classified as water-resistant, waterproof, or watertight. To ensure compliance and safety, these cables.
