

# What is a network cabling patch panel module

## Overview

A patch panel, including fiber patch panels and Ethernet patch panels, is a passive network device that centralizes, terminates, and organizes multiple copper or fiber cables. Serving as the interface between permanent cabling and active equipment, it provides clearly labeled ports that make. Patch panels are one of the best ways to manage an expansive local area network (LAN) by providing quick and easy access to the ports and connections that connect them altogether. Typically rack-mounted, it features ports on the front for easy access and termination points at the back for permanent cabling. By linking wall outlets or devices to network switches through. For IT managers, understanding that the patch panel is a critical component in the structured cabling system is essential for building a scalable and resilient network infrastructure. At Turn-Key Technologies, we design and implement high-performance network setup solutions.
