

Where is the fiber optic cable interface on the inverter

Overview

Connect the PPCS link of the AINT (ACS 800 series modules) board of the inverter (or IGBT supply) module to fibre optic connectors V57 and V68 of the RDCU. Note: The recommended maximum distances for the fibre optic link is 10 m (for plastic cable). The RDCU can also be powered from an external 24 V DC supply. When you energize the drive with all fiber-optic cables disconnected, No Inverters and No Converters port verification errors are indicated. Operation principle and hardware description 4. Planning the mechanical installation 5. Control unit

Read through this manual carefully before you start installation and startup of MOVIDRIVE® drive inverters with the DF121B INTERBUS with fiber optic cable option card. Speedwire uses the internationally established Ethernet standard, the Ethernet based IP protocol as well as the communication protocol SMADData2+. The error indicated on the inverter screen or on the SolarEdge monitoring portal, if there is such an indication.
